Summary

Junior Software Engineer focused on frontend and cloud technologies, with hands-on experience designing, deploying and supporting AWS-based applications. Strong foundation in cloud computing, Linux environments, Infrastructure as Code and CI/CD pipelines using GitHub Actions. Built full-stack and serverless projects using React, TypeScript, Node.js, AWS CDK and PostgreSQL, with a focus on automation, security and reliable architecture.

Completed the Amazon Cloud Support Specialist Program with Honors and currently expanding my practical AWS experience through independent cloud projects. Seeking an entry-level Cloud, DevOps, IT Support or Software Engineering role within a collaborative technical team.

PROJECTS:

DocuFlow AWS – Smart Document Processing Platform [React, TypeScript, Node.js, AWS CDK, S3, Lambda, IAM, CloudWatch]

- Developing a serverless document processing platform with document validation, status tracking and secure file storage.
- Provisioned AWS infrastructure using CDK, including an S3 bucket with HTTPS-only access.
- Implemented Lambda-generated presigned URLs for secure document upload and download workflows. Added IAM security, CloudWatch logging and automated tests.
- Designed the architecture for future integration with API Gateway, DynamoDB, Step Functions, Cognito and Amazon Bedrock.

GitHub: [Smart Document Processing Platform – DocuFlow AWS](#)

Shift Allocation Automation System [React, TypeScript, Node.js, Express, GraphQL, PostgreSQL, AWS]

- Reduced manual planning complexity and improved allocation consistency in a high-volume operational environment
- Designed and deployed cloud-based architecture using AWS managed services (RDS, S3, CloudFront, App Runner, Cognito)
- Implemented secure API communication with authentication and role-based access control (JWT)
- Applied infrastructure separation (compute, storage, delivery) following cloud best practices
- Developed backend services and data models to support real-time updates and operational decision-making

GitHub: [Shift Allocation System](#)

Personal Portfolio [React, TypeScript, Vite, AWS S3, CloudFront, GitHub Actions]

- Designed and deployed a personal portfolio using AWS static hosting architecture (S3 + CloudFront)
- Implemented CI/CD pipeline using GitHub Actions for automated build and deployment
- Configured environment variables and optimised deployment workflow

Live: <http://www.rafaldevops.com/>

NeoForge [React, TypeScript, Vite, Tailwind CSS, React Router, Supabase]

- Built a full-stack web application with authentication and session management using Supabase

- Implemented protected routes and dynamic navigation using React Router
- Developed modular, maintainable frontend architecture with strong type safety in TypeScript
- Implemented real-time data synchronisation and full CRUD operations via Supabase APIs
- Configured secure environment variables for API communication and production deployment
- Delivered responsive UI using Tailwind CSS and optimised performance with Vite

Working Experience:

20.09.2022 – present - Operations Associate at Amazon

- Worked in a high-volume, time-critical operational environment similar to production systems
- Identified and resolved operational issues using structured problem-solving and root cause analysis
- Followed strict process standards and operational procedures
- Demonstrated attention to detail in maintaining accuracy and system reliability

14.10.2023 – 31.12.2025 - RYOBI – Die Cast Operator

- Performed root-cause analysis on production issues
- Interpreted technical schematics and documentation
- Created operational reports and spreadsheets to improve production tracking

1.07.2021 - 15.09.2022 – Euro Polymers Group – Roofer

- Precisely cut felt, shingles and strips of flashing to fit angles formed by walls, vents and intersecting roof surfaces
- Managed inventory of roofing supplies and materials
- Removed imperfections and applied chemical solutions to treat materials and achieve smooth finishes
- Determined materials needed for daily shift and loaded vehicles with equipment and supplies
- Removed old roofing material and properly disposed of all debris to maintain clean, organized work sites

Education:

2026	Amazon Cloud Support Specialist Program, Correlation One Completed more than 161 hours of coursework, AWS labs and technical assignments. Developed practical knowledge of AWS cloud services, networking, IAM, security and cloud architecture. Completed preparation for the AWS Certified Cloud Practitioner examination. Gained hands-on experience with cloud infrastructure, troubleshooting and AWS best practices. Awarded the Cloud Support Specialist Program Honors Certificate on 24 June 2026	
2024 - 2025	Frontend Development Training (GoIT, 2024–2025)	
	Completed practical projects in JavaScript and React, including	authentication, REST API integration and state management.
2009 – 2012	GWSH Silesian Higher School of Economy, Katowice Bachelor's Degree in International Relations (Poland)	
2004 – 2007	High School Diploma (equivalent to UK A-levels) High School of Economy, Wojciecha Ranzoska, Jastrzebie Zdroj	

Core Skills:

- Cloud Computing (AWS)
- Cloud Architecture (IaaS, PaaS, SaaS)
- Infrastructure Fundamentals
- Linux Administration
- CI/CD (GitHub Actions)
- REST APIs
- Basic Networking Concepts
- Identity & Access Management (IAM)
- Problem Solving & Root Cause Analysis
- Troubleshooting and system diagnostics
- Understanding of IT service management principles (ITIL)

DevOps & Tools:

- Git, GitHub
- GitHub Actions (CI/CD pipelines)
- REST APIs
- Deployment workflows and environment configuration
- Netlify, Parcel
- Familiarity with ticketing systems and incident management workflows (e.g. Jira)

Programming & Frontend:

- JavaScript (ES6+), TypeScript
- Python (basic)
- React, Redux
- HTML5, CSS3, SASS, Tailwind CSS

Languages:

English (Professional working proficiency)

Polish (Native)
